

## Assignment

### Temperature Matters - Board Builders

---

#### ASSIGNMENT INSTRUCTIONS

1. Create a new board using the Board Builder.
2. Include the following elements into your board:
  - o Answers to all 3 essential questions - you may make lists, graphics, videos, audio recordings, etc... but the questions need to be answered in depth. Be sure to reword the question so that listeners will understand what you are talking about without knowing the questions.
  - o Notes about the experiment you did with your group - this may also be displayed however you would like, but be sure to tell about what you did and what happened
  - o Include graphics that support the topic of matter - you may use Google or Discovery to find images - be sure to link to the original (ask Mrs. Erickson if you need help with this)
  - o Keep it organized - messy projects will lose points
  - o Choose QUALITY information - I am looking for **facts** and **details** to show me that you understand the essential questions
3. Share your finished board with me, then present it to the class!
